

The Benefits of Massage

Bodywork Goes Beyond Relaxation

As you lie on the table under crisp, fresh sheets, hushed music draws you into the moment. The smell of sage fills the air and you hear the gentle sound of massage oil being warmed in your therapist's hands. Once the session gets underway, the daily stressors and aching muscles fade into an oblivious 60 minutes of relief, and all you can comprehend right now is not wanting it to end.

But what if that hour of massage did more for you than just take the pressures of the day away? What if that gentle, Swedish massage helped you combat cancer? What if bodywork helped you recover from a strained hamstring in half the time? What if your sleep,

cultures. Touching is a natural human reaction to pain and stress, and for conveying compassion and support. When you bump your head or have a sore calf, the natural response is to rub it to feel better. The same was true of our earliest ancestors.

Healers throughout time and throughout the world have instinctually and independently developed a wide range of therapeutic techniques using touch. Many are still in use today, and with good reason. We now have scientific proof of the benefits of massage -- benefits ranging from treating chronic diseases and injuries to alleviating the growing tensions of our modern lifestyles. Having a massage does more

Along with easing stress -- the No. 1 cause of disease -- massage has a long list of benefits.

digestion, and mood all improved with massage and bodywork? What if these weren't just "what if's"?

Evidence is showing that the more massage you can allow yourself, the better you'll feel. Here's why:

Massage as a healing tool has been around for thousands of years in many

than just relax your body and mind -- there are specific physiological and psychological changes that occur, and even more so when massage is utilized as a preventative, frequent therapy and not simply mere luxury. Massage not only feels good, but it can cure what ails you.

The Fallout of Stress

Experts estimate that 80 percent to 90 percent of disease is stress-related. Massage and bodywork is there to combat that frightening number by helping us remember what it means to relax. The physical changes massage brings to your body can have a positive effect in many areas of your life. Besides increasing relaxation and decreasing anxiety, massage lowers blood pressure, increases circulation, improves injury recovery, encourages deep sleep, and increases concentration. It reduces fatigue and gives you more energy to handle stressful situations.

Massage is a perfect elixir for good health, but it can also provide an integration of body and mind. By producing a meditative state or heightened awareness of the present moment, massage can provide emotional and spiritual balance, bringing with it true relaxation and peace.

The incredible benefits of massage are doubly powerful if taken in regular "doses." Researchers from the Touch Research Institute (TRI) at the University of Miami, found that recipients of massage can benefit even in small doses (15 minutes of chair massage or a half-hour table session). They also note that receiving bodywork two to three times a week is even more beneficial. While this may not be feasible, it's nice to know that this "medicine" only gets better with frequency.

What It Does

In an age of technical and, at times, impersonal medicine, massage offers a drug-free, non-invasive, and humanistic approach based on the body's natural ability to heal itself. Following is a brief list of the many known, research-based benefits of massage and bodywork:

- Increases circulation, allowing the body to pump more oxygen and nutrients into tissues and vital organs;
- Stimulates the flow of lymph, the body's natural defense system, against toxic invaders. For example, in breast cancer patients, massage has been shown to increase the cells that fight cancer.

Furthermore, increased circulation of blood and lymph systems improves the condition of the body's largest organ -- the skin;

- Relaxes and softens injured and overused muscles;
- Reduces spasms and cramping;
- Increases joint flexibility;
- Reduces recovery time and helps prepare the body for strenuous workouts, reducing subsequent muscle pain of athletes at any level;
- Releases endorphins -- the body's natural painkiller -- and is proving very beneficial in patients with chronic illness, injury, and post-op pain;
- Reduces post-surgery adhesions and edema and can be used to reduce and

realign scar tissue after healing has occurred;

- Improves range-of-motion and decreases discomfort for patients with low back pain;
- Relieves pain for migraine sufferers and decreases the need for medication;
- Provides exercise and stretching for atrophied muscles and reduces shortening of the muscles for those with restricted range of motion;
- Assists with shorter labor for expectant mothers, as well as reduces the need for medication, eases postpartum depression and anxiety, and contributes to a shorter hospital stay.

The benefits of massage are diverse. No matter how great it feels, massage isn't just a luxury; it's a health necessity.

To get the full benefits of massage, take it easy after your session and let it soak in.

Why Buy Organic?

Is the Higher Price Worth It?

While shopping in your grocery store's produce section, you may notice the organically grown apples are pocked and not as big and perfectly round as the conventional produce, but they are more expensive. What's the difference, and which do you choose? Your decision may significantly impact not only your health but the health of the planet and the economy.

DEFINING "ORGANIC"

Organic foods are derived from sustainable farming practices that maintain and replenish soil fertility without the use of toxic pesticides and fertilizers. These foods are minimally processed and do not include artificial ingredients or preservatives. On the other hand, conventional farms often rely heavily on pesticides, genetic modification, synthetic hormones, and antibiotics.

DOES IT REALLY MATTER?

To understand the fallout of conventional farming is to realize the argument for organics. Bob Scowcroft,

executive director of the Organic Farming Research Foundation, touches on the devastating consequences of pesticides. "DDT nearly eliminated the American eagle by affecting their ability to reproduce" he says. "Since World War II, we've introduced more than 9,000 chemicals into the environment. And we don't know the full impact on humans and different sized humans," he adds, alluding to studies revealing damaging effects on children.

When you buy organically certified foods, you're ensured they are free of pesticides, hormones, antibiotics, and genetic DNA modification.

"Organics are better for the environment, and it's an investment in the revitalization of rural America," Scowcroft says. Organic farms are usually smaller, family-owned farms contributing to the economy of struggling rural America, he explains. The organic choice may be a little more expensive, but it's an investment in your health and the future.

Organic foods are free of pesticide residue.

Here Comes the Sun

Updated UV Index Shines Light on Rays

A crucial warning system has been recently updated for your skin's protection. In compliance with the World Health Organization, the Environmental Protection Agency and the National Weather Service revamped the UV Index, a system created to alert people about the level of harmful ultraviolet (UV) light rays from the sun. Overexposure to UV rays can cause wrinkles and premature aging, skin cancer, cataracts, and immune system suppression.

Many factors influence the strength of UV rays: UV light is stronger in the summer, at higher altitudes, and in areas closer to the equator. It's also stronger at midday, from 10 a.m. to 4 p.m., when the sun is directly overhead.

The new UV index ranges from 0-11 with guidelines as follows:

0-2: **LOW.**

Minimal exposure for the average person, but watch for reflected UV from snow and water.

3-5: **MODERATE.**

Stay in the shade during midday. Cover-up outside.

6-7: **HIGH.**

Wear a hat, sunglasses, and a sunscreen with a minimum sun protection factor (SPF) of 15. Avoid midday sun.

8-10: **VERY HIGH.**

Take extra precautions, and avoid midday sun. Wear protective clothing.

11: **EXTREME.**

Take all precautions, seek shade, and avoid midday sun. If possible, stay indoors.

As part of its daily forecast, the National Weather Service publishes the UV index for each area of the country. Go to www.epa.gov/sunwise/uvindex.html and enter your zip code to find your UV index for the day. The Weather Channel, as well as most local TV stations, include the UV index in their weather forecast. It can also be found at www.weather.com.

For a detailed description of the UV index, or for more information on sun protection, visit www.epa.gov/sunwise.
